

Application method

Micro-protection

Micro-protection with a maintenance cleaner leaves a film on the flooring to protect it, improve its appearance and make routine cleaning easier.

Step 1: Weather and general information

High levels of air humidity: longer drying time!

Low air humidity and high temperatures: drying time too short!

Avoid draughts Switch off air conditioning and underfloor heating.

Residual moisture in the flooring can cause the maintenance film to powder.

Step 2: Dose, prepare ready-to-use solution

First add water, then add the correct amount of detergent, following the dosage instructions on the label. Always use cold water!

Follow operating instructions. Wear personal protective equipment.

Step 3: Micro-protection

Soak mop cover in cleaning solution and wring out lightly. Wipe the surfaces in a systematic figure-of-8 movement. Ensure complete coverage of the surface.

Step 4: Drying time

Leave the surface to dry. Once dry, the surface can be polished. Polishing condenses the maintenance film and improves the shine.

The safety advice and instructions for use on the containers, the product information and the safety data sheet must be observed. Please also observe the cleaning and maintenance recommendations of the manufacturers as well as the instruction manual of the machines and equipment used.

Application method

Micro-protection

Step 5: Polish

Make even, overlapping strokes until a shine appears. Adjust the machine speed and pad / brush pressure in line with the surface to be polished.
