

## Application method

# Spray buffing

Spray buffing can be used to clean, maintain and improve dirty maintenance films.

### Step 1: Preparation

Stack furniture where necessary. Sweep or use a damp cloth (gauze cloth) to remove coarse, loose dirt.

### Step 2: Prepare machine, make up ready-to-use solution

Check machine for damage. Attach a suitable polishing pad or polishing brush to the bottom of the polishing machine. First fill the spray bottle with water, then add the correct amount of detergent, following the dosage instructions on the label. Always use cold water!

### Step 3: Spray buffing

Spray the surface sparingly with the product solution in sections. Polish the damp surface with the machine and an appropriate pad until a shine appears or dirt has been removed. Turn over or replace pads regularly.

*Tip!*

*When using high-speed machines, use a starting current limiter to prevent fuses from "blowing out".*

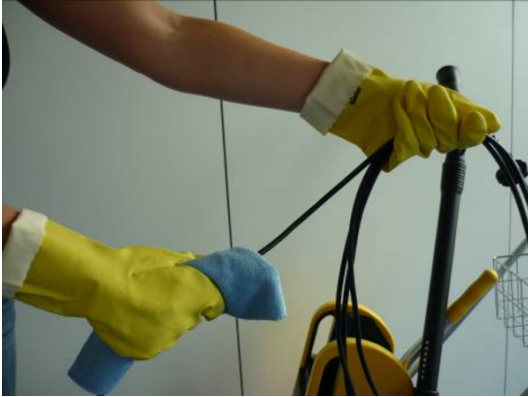

The safety advice and instructions for use on the containers, the product information and the safety data sheet must be observed. Please also observe the cleaning and maintenance recommendations of the manufacturers as well as the instruction manual of the machines and equipment used.

## Application method

### Spray buffing

#### Step 4: Clean the devices

Clean devices with a damp cloth. Check cable for damage.
